Quarterly Operations Report

The engineering team shipped three major releases this quarter. Deployment frequency increased and the number of production incidents fell compared with the previous quarter.

Hiring remained steady. The company added six engineers and two sales representatives. Attrition stayed low across all departments.

Cloud infrastructure costs rose because of higher traffic, but the cost per request dropped after the caching migration. Overall margins improved for the quarter.

Customer satisfaction scores improved for the third quarter in a row. Support response times were faster and the backlog shrank significantly.
